

Brief Presentation

Maryland Insurance Administration
Virtual Session

Health Inequity Root Cause and Implications

Presented May 27, 2021

Kim Dobson Sydnor, PhD

Dean, School of Community Health
and Policy

Explaining the Social Determinants of Health

- places where people *live, learn, work, and play*
- affect a wide range of health and quality-of-life risks and outcomes.

<https://www.cdc.gov/socialdeterminants/index.htm>

Explaining the Social Determinants of Health

*Places where
people live,
work, learn,
and play are
**not all the
same***

Link between
SDoH and
Health Equity
and Inequities

***HEALTH INEQUITY results
from***

- ***the unequal distribution of power, income, goods, and services***
- ***power inequity influences structural determinants and conditions of daily life***

Reference to - CSDH (2008). *Closing the gap in a generation: health equity through action on the social determinants of health. Final Report of the Commission on Social Determinants of Health*. Geneva, World Health Organization.

Power Distribution

- *unequal distribution of power, income, goods, and services*

- *is often based on race, ethnicity, and geographic location which are tightly woven into the health of communities*

Drivers of Health Inequity

Figure 1

Health Disparities are Driven by Social and Economic Inequities

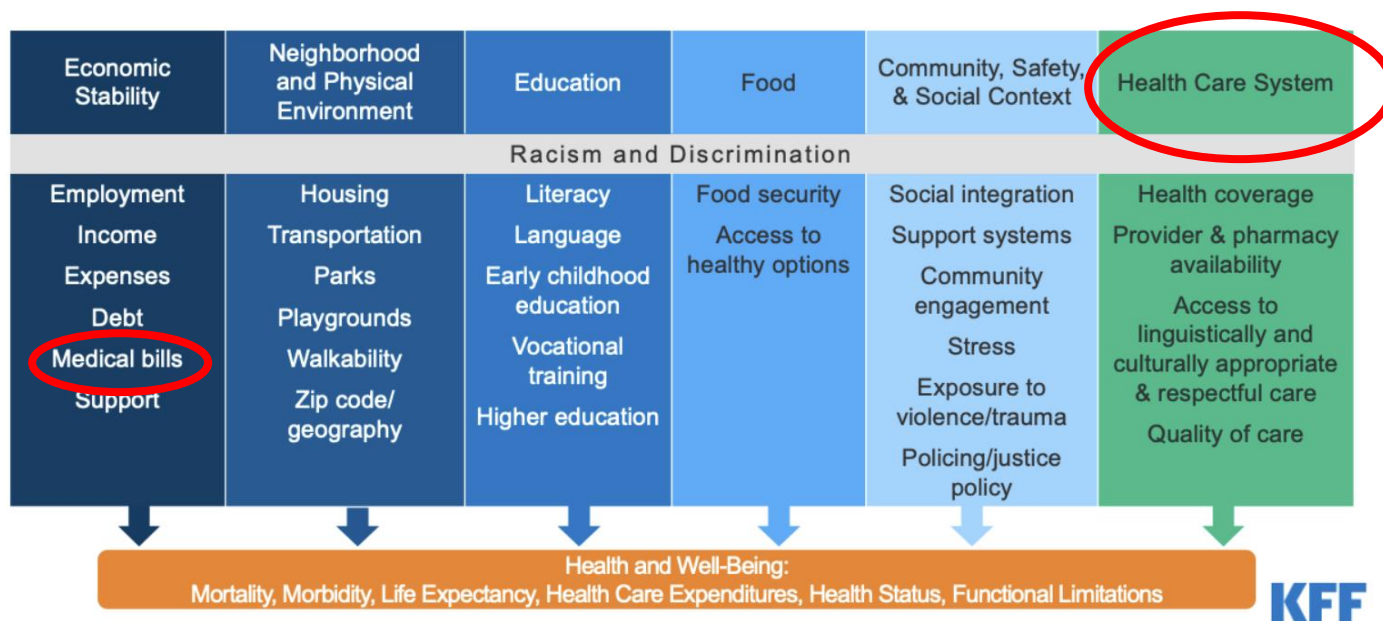

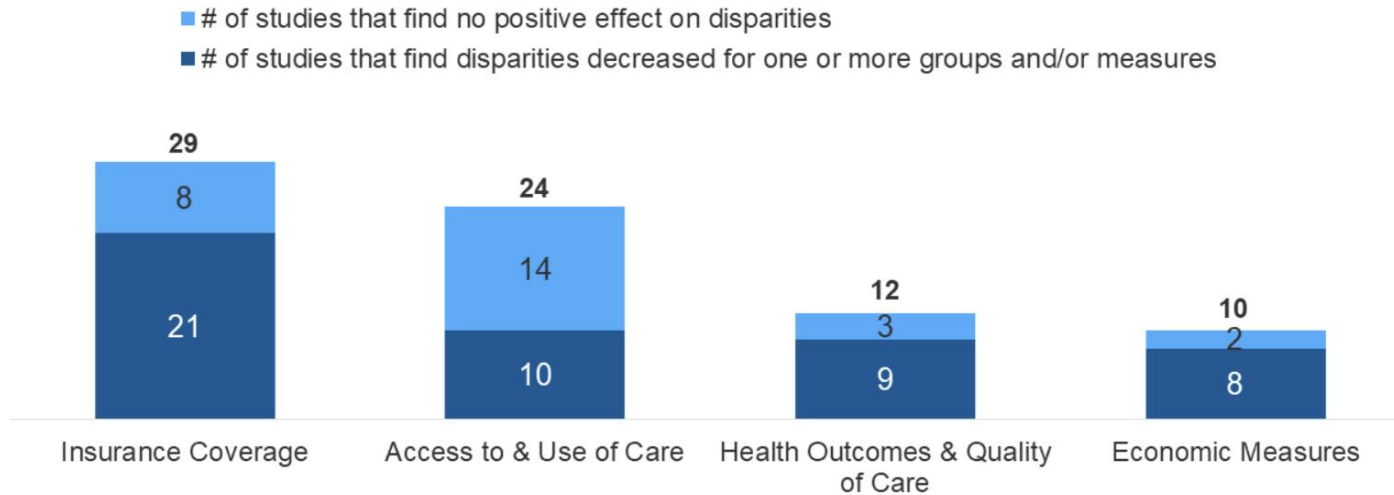

Figure 1: Health Disparities are Driven by Social and Economic Inequities

Figure 1

Impact of Medicaid Expansion on Racial/Ethnic Disparities

NOTES: Studies may have findings in multiple areas and be counted in multiple bars. Many studies have mixed findings; for example, finding a decrease in disparities for one racial/ethnic group but no effect on disparities among other groups.

SOURCE: KFF analysis of 65 studies of the impact of state Medicaid expansion published between January 2014 and July 2020.

What Insurance Can Do

- The 2020 NAIC Summit - “Underwriting guidelines for home insurance were based on age and value which, regulators discovered, was a proxy for race given past discrimination in the neighborhoods”
- Redlining practices have produced long-term effects even as the practices have been outlawed but linger through “place-based” decision-making
- The most “in need” zip codes (communities) receive the highest risk ratings and therefore exacerbate inequities
- The direct and indirect costs are considerable

Inequity in Homeowner and Auto Insurance

Observations

- *inequities have a strong racial and spatial component*
- *equal allocation of resources where inequity exists does not resolve the problem.*
- *standard practices fail to address systemic issues*
- *efforts to redress inequities require systemic change and coordinated effort – transformative approaches*
